

SUBJECT INDEX

A

- aba* mutants
 - photoprotection and, 338-39, 342, 348
- abi* mutants
 - signal transduction and, 226-28
- Abiotic stresses
 - silicon and, 641, 650, 652-55
- abr* mutants
 - gametophyte development in ferns and, 166
- Absciscic acid
 - C₄ gene expression and, 205-6
 - crassulacean acid metabolism and, 320
 - gametophyte development in ferns and, 166, 178, 181
 - leaf development in angiosperms and, 428
 - phosphate acquisition and, 676
 - plant cold acclimation and, 589-92
 - plant protein serine/threonine kinases and, 104, 116
 - pressure probe and, 457
 - signal transduction and, 222, 226-28, 236-37
- Acclimation
 - cold
 - freezing tolerance genes and, 571-94
- Acetabularia* spp.
 - pressure probe and, 449
- Acetate
 - chlorophyll degradation and, 69
 - history of research, 21
- Acetate/mevalonate (MVA) pathway
 - DOXP pathway of isoprenoid biosynthesis and, 48-55
- Acetic acid
 - chlorophyll degradation and, 72
- Acetobacter acetii*
 - cellulose biosynthesis and, 249
- Acetobacter xylinum*
 - cellulose biosynthesis and, 245-46, 249-68
- Acetyl coenzyme A
 - history of research, 7
- Acid phosphatases
 - phosphate acquisition and, 671
- Acifluorfen
 - gametophyte development in ferns and, 166
- Acinetobacter calcoaceticus*
 - shikimate pathway and, 482, 491
- Acquisition
 - leaf development in angiosperms and, 428-29
 - phosphate, 665-86
- Acs* genes
 - cellulose biosynthesis and, 250-51
- Activation-transferred DNA tagging mutants
 - signal transduction and, 238-39
- Activators
 - cellulose biosynthesis and, 245-70
- Adenosine diphosphate (ADP)
 - phosphate translocators in plastids and, 34, 39-40
- Adenosine triphosphate (ATP)
 - chlorophyll degradation and, 82
 - history of research, 11, 21
 - phosphate acquisition and, 671, 674
 - phosphate translocators in plastids and, 29-30, 34, 38-39
 - plant protein serine/threonine kinases and, 108
 - water-water cycle in chloroplasts and, 624-25
- Adenylate translocator
 - phosphate translocators in plastids and, 34
- Adiantum capillus verenis*
 - gametophyte development in ferns and, 172-73
- "Adoption"
 - silicon and, 650
- ag16.2* mutant
 - photoprotection and, 336
- Agavaceae
 - silicon and, 647
- Agrobacterium rhizogenes*
 - arbuscular mycorrhizal symbiosis and, 363
- Agrobacterium tumefaciens*
 - cellulose biosynthesis and, 250-52, 255
 - cell wall extensibility and, 409
 - crassulacean acid metabolism and, 311, 323-24
 - plant protein serine/threonine kinases and, 100
 - shikimate pathway and, 486-87
- Air-seeding
 - pressure probe and, 463
- Al₂(SO₄)
 - gametophyte in ferns and, 166, 167
- Alanine
 - nitrate reductase and, 290-92, 295
- Alcaligenes eutrophus*
 - nitrate reductase and, 286
- Aldolases
 - history of research, 11
- Alfafuran
 - phosphate acquisition and, 671
- Alfalfa
 - phosphate acquisition and, 671
 - plant protein serine/threonine kinases and, 115, 117
- Algae
 - asymmetric cell division and, 505-32
 - cellulose biosynthesis and, 247-49, 254, 256
 - chlorophyll degradation and, 71, 86
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 539-62
 - DOXP pathway of isoprenoid biosynthesis and, 48-61
 - history of research, 10-11, 20, 22
 - nitrate reductase and, 277, 285, 288, 291, 297
 - phosphate acquisition and, 672
 - photoprotection and, 333-52
 - silicon and, 641, 645
- Allergens
 - grass pollen
 - cell wall extensibility and, 403
- Allium porrum*
 - arbuscular mycorrhizal symbiosis and, 374
- Allosteric sites
 - shikimate pathway and, 478, 486
- Aloe arborescens*
 - crassulacean acid metabolism and, 311, 322
- Alteration of generations
 - gametophyte development in ferns and, 163, 167

- Aluminum
phosphate acquisition and, 670
silicon and, 643, 648, 653-55
- Amanita muscaria*
arbuscular mycorrhizal
symbiosis and, 378
- Amaranth
C₄ gene expression and, 187,
190, 193, 195-97, 200,
204, 208-10
- Amaryllidaceae
silicon and, 647
- Amino acids
arbuscular mycorrhizal
symbiosis and, 370
C₄ gene expression and, 207
cell wall extensibility and,
400-2, 404-5, 410
chlorophyll degradation and,
70, 75-76
DOXP pathway of isoprenoid
biosynthesis and, 59-60
leaf development in
angiosperms and, 427
nitrate reductase and, 277,
281-82, 287, 289-96
phosphate acquisition and, 680
phosphate translocators in
plastids and, 28-30, 34-36
plant protein serine/threonine
kinases and, 97-123
shikimate pathway and,
473-92
- 2-Aminoethyl-L cysteine
gametophyte development in
ferns and, 166
- 3-Amino-5-hydroxy benzoic acid
(AHBA)
shikimate pathway and, 489,
490
- Aminolevulinic
chlorophyll degradation and,
69
- Amino terminal signal sequences
shikimate pathway and, 473
- AMO 1618
gametophyte development in
ferns and, 178
- Amphibious sedge
C₄ gene expression and, 187,
190, 205-6
- Amycolatopsis* spp.
shikimate pathway and, 482,
489-90
- Amyloplasts
phosphate translocators in
plastids and, 32
- Anabaena* 7120
CO₂ concentrating mechanisms
microorganisms and, 544
- Anemia phyllitidis*
gametophyte development in
ferns and, 172
- Angiosperms
arbuscular mycorrhizal
symbiosis and, 361-80
chlorophyll degradation and,
84, 86-87
gametophyte development in
ferns and, 163-65
leaf development and
CLAVATA, 422-23
complexity, 428-29
compound leaves, 431-39
epidermal differentiation,
430-31
FIMBRIATA/UFO, 437
FLO/FLY, 423-24, 438
future research, 439-40
genetic analyses, 421-22,
432-36
gene expression at time of
leaf initiation, 421-22
introduction, 420
KNOTTED-like genes, 422,
436-37
later morphogenetic events,
424-31
leaf initiation, 421
leaf partitioning into
domains, 425-28
leaf shoot continuum
hypothesis, 438-39
LEAFY/FLORICAULA,
423-24, 438
MGOUN, 423
molecular analyses, 436-38
morphogenesis, 420-32
morphological analyses,
432-36
NAM, 422
pea leaves, 432-33
PHANTASTICA, 423
photosynthetic development,
430
shape, 428-29
shoot apical meristem,
420-24
size, 428-29
terminal ear, 423
tissue identities, 429-31
tomato leaves, 433-36
vascular development,
430
silicon and, 647
- Annual brome
silicon and, 651
- Antennae
light-harvesting
photoprotection and,
340-41
- Antheridia
gametophyte development in
ferns and, 176-78, 181
plant protein serine/threonine
kinases and, 107
- Antheridiogen
gametophyte development in
ferns and, 175-81
- Antibiotics
shikimate pathway and, 474,
489-90
- Antibodies
C₄ gene expression and, 192
cell wall extensibility and,
406-7
gametophyte development in
ferns and, 181
nitrate reductase and, 292
phosphate acquisition and, 685
shikimate pathway and, 476
- Antioxidants
photoprotection and, 333-52
- Antiporters
phosphate translocators in
plastids and, 29-30, 39
- Antirrhinum* spp.
leaf development in
angiosperms and, 425,
435, 439
- Antisense plants
C₄ gene expression and, 197
phosphate acquisition and, 682
photoprotection and, 350
- Apices
root
roots in soil and, 695-712
- Apogamy
gametophyte development in
ferns and, 167
- Apoplast mapping
pressure probe and, 459-60
- Apoptosis
chlorophyll degradation and,
85-86
- Apospory
gametophyte development in
ferns and, 167
- Appressorium
arbuscular mycorrhizal
symbiosis and, 365-66
- Arabidopsis thaliana*
asymmetric cell division and,
505-32
C₄ gene expression and, 199,
202-4
cellulose biosynthesis and,
250-51, 255, 260-63
cell wall extensibility and,
400-10
chlorophyll degradation and,
71, 80, 84

- DOXP pathway of isoprenoid biosynthesis and, 53, 59
gametophyte development in ferns and, 165, 169, 173, 180, 183
history of research, 22
leaf development in
angiosperms and, 422, 426, 428-29, 431, 436-37, 439
nitrate reductase and, 280, 291
phosphate acquisition and, 672, 678-82, 684, 686
phosphate translocators in plastids and, 31, 33-34, 41
photoprotection and, 335, 338-39, 341-42, 344, 346, 348
plant cold acclimation and, 571, 577-94
plant protein serine/threonine kinases and, 97-122
pressure probe and, 451
shikimate pathway and, 476, 486
signal transduction and, 219-40
Arbuscular mycorrhizal symbiosis
appressorium formation, 365-66
Arbuscules, 368-71
Arum spp., 368-71
carbon transfer from plant to fungus, 377-78
defense responses, 374-76
development, 364-72
early signaling events, 364-65
external mycelium, 371-72
fungi, 362-79
future research, 379-80
genetics, 372-76
introduction, 362
molecular analysis of fungal genome, 363-64
nodulation genes, 376
nutrient transport across interfaces, 376-79
penetration of root, 366-68
phosphate transfer from soil to plant via fungus, 378-79
Archegonia
gametophyte development in ferns and, 176-77, 182
Arginine
nitrate reductase and, 281, 287, 292, 295-96
phosphate translocators in plastids and, 34
shikimate pathway and, 481-82
Aristolochia spp.
leaf development in angiosperms and, 425
Arogenate
shikimate pathway and, 478
aro genes
shikimate pathway and, 475, 478-79
Aroids
leaf development in angiosperms and, 420
Aromatic amino acids
shikimate pathway and, 473-92
AROM complexes
shikimate pathway and, 479
Arum spp.
arbuscular mycorrhizal symbiosis and, 368, 369-71
Ascorbate
photoprotection and, 349
water-water cycle in chloroplasts and, 613-17, 621-22
Ascorbate peroxidase (APX)
photoprotection and, 345-46, 349-50, 352
water-water cycle in chloroplasts and, 601-29
Ash1p gene
asymmetric cell division and, 509
Aspartate
nitrate reductase and, 291-93, 295
plant protein serine/threonine kinases and, 109
Aspergillus nidulans
nitrate reductase and, 290
shikimate pathway and, 479, 491
Assimilatory linear electron transport
photoprotection and, 344-45
Asymmetric cell division
Arabidopsis, 521-23
Ash1p, 508-9
Bacillus subtilis, 513-14
Caenorhabditis elegans, 511-13
cell wall, 519-21
cytoskeleton, 516-18
daughter cell fate after cell division, 511-12
Drosophila, 507-11
external signals, 511-13
first division of plant embryo, 519-23
Fucus, 519-21
future research, 530-32
glp-1, 511-12
intrinsic determinants, 508-11
introduction, 506
MOM-2, 512-13
numb, 509-11
orientation of cell division, 516-18
overview, 515-19
prospero, 509-511
pollen development, 527-29
radial patterning of root, 523-26
stem cell divisions in root meristem, 526-27
stomata, 529-30
survey of asymmetric cell divisions during plant life cycle, 518-19
vesicle transport, 519-23
yeast, 507-11
Asteraceae
leaf development in angiosperms and, 420
Aster tripolium
pressure probe and, 453
atpc1 mutant
crassulacean acid metabolism and, 320
AtPT2 gene
phosphate acquisition and, 679
Auxins
cell wall extensibility and, 401, 405-8
leaf development in angiosperms and, 430
plant protein serine/threonine kinases and, 104
signal transduction and, 222
Auxotrophic phenotypes
signal transduction and, 223-24
Avena sativa
silicon and, 657
Azetidine-2-carboxylate
gametophyte development in ferns and, 166
Azolla spp.
phosphate acquisition and, 678
Azuki bean
cell wall extensibility and, 410
- ## B
- Bacillus subtilis*
asymmetric cell division and, 513-14
shikimate pathway and, 486
Bacteria
arbuscular mycorrhizal symbiosis and, 361-80
asymmetric cell division and, 505-32
cellulose biosynthesis and, 245-46, 248-58, 262-64, 268

- CO₂ concentrating mechanisms
in photosynthetic
microorganisms and,
539-62
- DOXP pathway of isoprenoid
biosynthesis and, 50, 56,
58-59
- history of research, 6, 24
- nitrate reductase and, 281,
285-86
- phosphate translocators in
plastids and, 34-35
- plant protein serine/threonine
kinases and, 100, 106
- roots in soil and, 695-712
- shikimate pathway and, 473-91
- signal transduction and, 224
- silicon and, 656
- Bare zones**
roots in soil and, 695-712
- Barium carbonate**
history of research, 5
- Barley**
arbuscular mycorrhizal
symbiosis and, 367
- C₄ gene expression and, 207
- cellulose biosynthesis and, 261
- cell wall extensibility and, 401
- chlorophyll degradation and,
71-72, 76, 79-80
- DOXP pathway of isoprenoid
biosynthesis and, 57
- nitrate reductase and, 291-92
- phosphate acquisition and, 682,
684
- photoprotection and, 344
- plant protein serine/threonine
kinases and, 107, 116
- pressure probe and, 452, 460
- roots in soil and, 703
- signal transduction and, 223,
236
- silicon and, 653-54
- Bcs genes**
cellulose biosynthesis and,
250-51
- Beans**
phosphate acquisition and, 667
- Beta vulgaris*
pressure probe and, 454
- Bi-directional nutrient transfer**
arbuscular mycorrhizal
symbiosis and, 361-80
- Binary switches**
signal transduction and, 222,
224
- Biochemistry**
chlorophyll degradation and,
67-87
- nitrate reductase and, 277-98
- overview, 659
- phosphate acquisition and, 671
- silicon and, 657-58
- Biotic stresses**
silicon and, 650, 652, 656-57
- Bleaching**
chlorophyll degradation and,
70, 82-83
- Blepharoplasts**
gametophyte development in
ferns and, 181
- blt1* mutant
gametophyte development in
ferns and, 166
- Blue green alge**
history of research, 10
- Blumeria graminis*
silicon and, 657
- Boergeria* spp.
cellulose biosynthesis and, 254
- Boodlea* spp.
cellulose biosynthesis and, 254
- Boric acid**
pressure probe and, 457
- Boron**
silicon and, 647-48
- Branch points**
DOXP pathway of isoprenoid
biosynthesis and, 60-61
- shikimate pathway and, 473,
489-91
- Brassicaceae**
leaf development in
angiosperms and, 436
- Brassica* spp.
chlorophyll degradation and,
73-74, 77
- phosphate acquisition and, 670,
672, 674
- plant cold acclimation and, 589
- plant protein serine/threonine
kinases and, 111, 114
- roots in soil and, 702
- shikimate pathway and, 486
- Brassinosteroid**
signal transduction and, 223
- BR11* gene
plant protein serine/threonine
kinases and, 111, 113
- signal transduction and, 223
- Bromus secalinus*
silicon and, 651
- Brookhaven National Laboratory**
history of research, 5-9
- Bryophyllum* spp.
crassulacean acid metabolism
and, 313, 321
- Bryophytes**
arbuscular mycorrhizal
symbiosis and, 361-80
- chlorophyll degradation and, 86
- silicon and, 649
- Bundle sheath**
C₄ gene expression and,
187-210
- Bypass reactions**
phosphate acquisition and,
671
- bZIP proteins**
leaf development in
angiosperms and, 427
- C**
- C₄ gene expression
abscisic acid, 205-6
- amaranth mutants, 209-10
- C3 dicot rice, 198
- C3 dicot tobacco, 198
- C₄ monocot maize, 198
- C₄ photosynthesis, 190-93
- Cab* genes, 203
- Cah* genes, 195-96
- cell-type specific regulation of
diverse genes, 190-92
- chloroplasts, 203-4
- differential gene expression,
190-93
- diverse signals, 204-8
- evolution, 193-96
- Flaveria* C₃-C₄ hybrids, 209-10
- genetic analysis, 208-10
- introduction, 188-90
- leaf development, 192-93
- light, 206-8
- maize mutants, 208-9
- Mdh* genes, 195
- Me* genes, 195
- metabolites, 205
- miscellaneous photosynthetic
genes, 196
- overview, 210
- Pdk* genes, 193-94, 199-201
- Ppc* genes, 195, 201-2
- RbcS* genes, 202-3
- regulation, 193-96, 204
- stress, 205-6
- transgenic plants, 196-98
- transient expression analysis,
199-202
- C₄ plants
silicon and, 646
- Cab* genes
C₄ gene expression and, 203
- Cactaceae**
crassulacean acid metabolism
and, 322
- cad2* mutant
photoprotection and, 339, 349
- Caenorhabditis elegans*
asymmetric cell division and,
511-13

- Caffeate
 - shikimate pathway and, 490
 - Cah* genes
 - C₄ gene expression and, 195-96
 - Calcium
 - cellulose biosynthesis and, 263-64
 - crassulacean acid metabolism and, 317, 320-21
 - nitrate reductase and, 295
 - phosphate acquisition and, 670
 - plant cold acclimation and, 592-93
 - plant protein serine/threonine kinases and, 104
 - shikimate pathway and, 490
 - silicon and, 641, 647-48, 654
 - Calcium-dependent protein kinase (CDPK) subfamily
 - plant protein serine/threonine kinases and, 104-7
 - Callose
 - cellulose biosynthesis and, 245-70
 - Calmodulin
 - shikimate pathway and, 490
 - Calvin-Benson cycle
 - history of research, 11, 20-21
 - Calvin cycle
 - C₄ gene expression and, 189-90, 209
 - DOXP pathway of isoprenoid biosynthesis and, 61
 - phosphate acquisition and, 674
 - photoprotection and, 345, 350
 - Canary grass
 - silicon and, 658
 - Candida albicans*
 - shikimate pathway and, 479
 - Canna indica*
 - history of research, 5
 - Canola
 - chlorophyll degradation and, 80
 - CAP genes
 - plant cold acclimation and, 580-81
 - Capsicum annuum*
 - shikimate pathway and, 483
 - Carbohydrates
 - crassulacean acid metabolism and, 305-24
 - history of research, 5-8, 10-11, 21
 - phosphate acquisition and, 675
 - phosphate translocators in plastids and, 32
 - shikimate pathway and, 473
 - silicon and, 658
 - Carbon
 - chlorophyll degradation and, 73, 77, 85
 - CO₂ concentrating mechanisms
 - in photosynthetic microorganisms and, 546-55
 - crassulacean acid metabolism and, 310
 - DOXP pathway of isoprenoid biosynthesis and, 49-51
 - history of research, 5-7, 23
 - leaf development in
 - angiosperms and, 420
 - phosphate acquisition and, 669
 - phosphate translocators in plastids and, 27-29, 31-33, 38, 40-41
 - shikimate pathway and, 487, 489, 492
- Carbon dioxide (CO₂)
 - C₄ gene expression and, 188
 - concentrating mechanisms in photosynthetic microorganisms
 - acclimation to changing CO₂ level, 541-45
 - biogeochemical aspects, 561
 - carboxylation site, 545-59
 - carboxysomes, 557-58
 - cyanobacteria, 549-52
 - ecophysiology, 560-62
 - eukaryotes, 552-55
 - future research, 562
 - gene expression, 542-44
 - HCO₃⁻, 551-55
 - inorganic carbon membrane transport, 546-55
 - introduction, 540-41
 - photosynthetic electron transport, 555-57
 - pyrenoids, 558-60
 - signal inducing response, 544-45
 - history of research, 5-6, 8, 10, 19-21, 24
 - nocturnal fixation
 - crassulacean acid metabolism and, 305-24
 - phosphate translocators in plastids and, 39
- Carboxylation site
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 545-60
- Carboxysomes
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 539-62
- Carotenoids
 - DOXP pathway of isoprenoid biosynthesis and, 47-62
 - photoprotection and, 347-48
- Caryophalles
 - crassulacean acid metabolism and, 322
- Cascades
 - leaf development in
 - angiosperms and, 421
 - silicon and, 656
- Casein kinase I/II subfamilies
 - plant protein serine/threonine kinases and, 119-20
- Casparian strips
 - roots in soil and, 711
- Catabolism
 - chlorophyll degradation and, 67-87
- Catalysis
 - cellulose biosynthesis and, 245-70
- Catharanthus roseus*
 - DOXP pathway of isoprenoid biosynthesis and, 51, 57
 - phosphate acquisition and, 681
- Cauliflower
 - phosphate translocators in plastids and, 31-32, 34
- Cavitation
 - pressure probe and, 462-64
- ccb* mutants
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 545, 558
- CBF/DREB1 regulatory genes
 - plant cold acclimation and, 571, 579-80, 585-89
- Ccm* mutants
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 558
- cdc2* genes
 - plant protein serine/threonine kinases and, 117-18
- Cedar
 - silicon and, 658
- Cel* genes
 - cell wall extensibility and, 407, 409
- Cell cycle
 - asymmetric cell division and, 505-32
 - gametophyte development in ferns and, 168, 170, 172

- Gluconeogenesis
crassulacean acid metabolism
and, 305-24
- Glucose
DOXP pathway of isoprenoid
biosynthesis and, 49-50
history of research, 6-7, 10, 21

plant protein serine/threonine
kinases and, 101

Glucose 6-phosphate
phosphate translocators in
plastids and, 28, 30,
32-33, 36-38, 40

Glutamate
cell wall extensibility and, 410
chlorophyll degradation and, 70
nitrate reductase and, 281, 293
plant protein serine/threonine
kinases and, 109

Glutamine
cell wall extensibility and, 410
nitrate reductase and, 294
phosphate translocators in
plastids and, 35

Glutathione (GSH)
photoprotection and, 349
water-water cycle in
chloroplasts and, 616-17,
621-22

Glyceraldehyde-3-phosphate
dehydrogenases
history of research, 7-8, 11, 20

Glycerate-3-phosphate
history of research, 8, 11

35S-Glycerol-3-P acyltransferase
photoprotection and, 339

Glycine
nitrate reductase and, 281,
290-92

N-Glycine
phosphonomethylglycine
shikimate pathway and, 474

Glycolysis
crassulacean acid metabolism
and, 305-24
phosphate acquisition and, 671

Glycosyltransferase superfamily
cellulose biosynthesis and,
262-63

Glyoxylate cycle
gametophyte development in
ferns and, 169

Glyphosate
gametophyte development in
ferns and, 166
shikimate pathway and,
473-74, 478, 481, 485-87

Golden algae
silicon and, 645

Gossypium hirsutum
cellulose biosynthesis and,
250-51
silicon and, 651, 653

GPT gene
phosphate translocators in
plastids and, 38-39

Graminae
silicon and, 648

Grapevines
silicon and, 656

Grasses
cell wall extensibility and, 403,
405-7
roots in soil and, 703
silicon and, 641, 648, 652, 658

Green algae
chlorophyll degradation and, 86
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and, 544,
546
DOXP pathway of isoprenoid
biosynthesis and, 48-52,
55-56
history of research, 20
phosphate acquisition and,
672
photoprotection and, 333-52

Green color
chlorophyll degradation and,
67-87

Growth
cell wall extensibility and,
391-412
silicon and, 641, 650-52

GSK3/shaggy subfamily
plant protein serine/threonine
kinases and, 120-21

Gunnera/Nostoc association
arbuscular mycorrhizal
symbiosis and, 370

Gymnosperms
arbuscular mycorrhizal
symbiosis and, 361-80
chlorophyll degradation and,
86

H

H₂ mutants
gametophyte development in
ferns and, 166

Hair roots
roots in soil and, 711-12

Halicystis spp.
cellulose biosynthesis and, 248
pressure probe and, 449, 457

Halocynthia spp.
cellulose biosynthesis and,
254

Haploidy
gametophyte development in
ferns and, 164, 166-68

HCO₃⁻
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and,
551-52, 554-55

Helicobacter pylori
DOXP pathway of isoprenoid
biosynthesis and, 59
shikimate pathway and, 481

Heme
chlorophyll degradation and, 71
nitrate reductase and, 277, 289,
293, 295-96

Hemicelluloses
cell wall extensibility and,
393-94

Herbicides
cellulose biosynthesis and,
260-61
DOXP pathway of isoprenoid
biosynthesis and, 61-62
shikimate pathway and, 473-74,
478-81, 485-87, 492

Herbivores
silicon and, 641

Hermaphrodites
gametophyte development in
ferns and, 167, 175-78,
180

her mutant
gametophyte development in
ferns and, 166, 179-80

Heterochronic switch
gametophyte development in
ferns and, 169

Heterodimerization
chlorophyll degradation and, 70

Heterogeneity
roots in soil and, 697-98, 710

Heterokontophyta
DOXP pathway of isoprenoid
biosynthesis and, 56

Heterologous expression
phosphate translocators in
plastids and, 27-41

Heteroscyphus spp.
DOXP pathway of isoprenoid
biosynthesis and, 53

Heterosigma akashiwo
nitrate reductase and, 280-81

Hexose
history of research, 6
phosphate translocators in
plastids and, 27, 32-33,
37, 40

Hexose-monophosphate shunt
history of research, 10

Higher plants
cellulose biosynthesis and, 247,
256
DOXP pathway of isoprenoid
biosynthesis and, 48,
52-54, 56-57
phosphate acquisition and, 671
plant protein serine/threonine
kinases and, 97-123

DOXP pathway of isoprenoid
biosynthesis and, 54
- Pressure probe
apoplast mapping, 459-60
cell rheological properties,
456-57
development of pressure probe
and variants, 448-52
future research, 465
hydraulic conductivity, 455-56
introduction, 448
reflection coefficient, 456
single cell sampling and
analysis, 457-60
symplast mapping, 457-59
turgor, 452-55
water relations parameters,
452-57
xylem pressure, 460-65
- PRETTYBOX program
shikimate pathway and, 476
- Prf* gene
plant protein serine/threonine
kinases and, 113-14
- Prokaryotes
chlorophyll degradation and,
86
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and,
539-62
shikimate pathway and, 473,
482, 485
- Proline
arbuscular mycorrhizal
symbiosis and, 370
chlorophyll degradation and, 75
nitrate reductase and, 292-93,
295-96
- Promoters
C₄ gene expression and,
187-210
- Prosopis juliflora*
silicon and, 655
- Protein encoding
shikimate pathway and, 473
- Protein kinases
plant protein serine/threonine
kinases and, 97-123
- Proteins
cell wall extensibility and,
391-12
- Proteoid roots
phosphate acquisition and,
669-70
- Proteoliposomes
phosphate translocators in
plastids and, 36
- Prothallus
gametophyte development in
ferns and, 173-77
- Protists
plant protein serine/threonine
kinases and, 105
- Protonema
gametophyte development in
ferns and, 171, 175-77
- Protoplasts
C₄ gene expression and, 197,
201-2, 207
history of research, 20
- Protozoa
nitrate reductase and, 281
shikimate pathway and, 474
- psa* mutants
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and, 549,
556
- psbT* mutant
photoprotection and, 336, 351
- PsENOD* genes
arbuscular mycorrhizal
symbiosis and, 376
- Pseudomonas* spp.
nitrate reductase and, 286
plant protein serine/threonine
kinases and, 113
shikimate pathway and, 489
- Pteridium aquilinum*
gametophyte development in
ferns and, 182

- Pteridophytes
 arbuscular mycorrhizal
 symbiosis and, 361-80
 chlorophyll degradation and, 86
 silicon and, 650
Pto gene
 plant protein serine/threonine
 kinases and, 100, 113-14
 Purification
 cellulose biosynthesis and,
 245-70
 Putrescine
 phosphate acquisition and,
 671
 PVPK-1 subfamily
 plant protein serine/threonine
 kinases and, 122
pygmy-tangled mutation
 leaf development in
 angiosperms and, 421
 Pyrenoids
 CO₂ concentrating mechanisms
 in photosynthetic
 microorganisms and,
 539-62
 Pyridine nucleotide specificity
 nitrate reductase and, 291-93
 Pyruvate
 crassulacean acid metabolism
 and, 305-24
Pythium spp.
 silicon and, 656

Q

- Quasi-essentiality
 silicon and, 646, 650
 Quinate
 shikimate pathway and, 473-92

R

- Radial patterning
 asymmetric cell division and,
 523-26
 Radicals
 superoxide
 water-water cycle in
 chloroplasts and, 601-29
Ralstonia spp.
 CO₂ concentrating mechanisms
 in photosynthetic
 microorganisms and, 545
 Random amplified polymorphic
 DNA (RAPD)
 shikimate pathway and, 483
 Ranunculaceae
 leaf development in
 angiosperms and, 420

- Rape
 chlorophyll degradation and,
 73
 phosphate acquisition and, 670
RbcS genes
 C₄ gene expression and, 202-3
 crassulacean acid metabolism
 and, 318
 RCC reductase
 chlorophyll degradation and,
 77-79
 Reactive oxygen species
 photoprotection and, 333-52
 Receptor-like kinase subfamily
 plant protein serine/threonine
 kinases and, 110-15
 Red algae
 chlorophyll degradation and, 86
 DOXP pathway of isoprenoid
 biosynthesis and, 51, 54,
 56
 Redox
 shikimate pathway and, 487
 Reductive carboxylic acid cycle
 history of research, 20
 Reductive processes
 C₄ gene expression and,
 187-210
 Reflection coefficient
 pressure probe and, 447, 456
 Regulation
 C₄ gene expression and,
 187-210
 chlorophyll degradation and,
 67-87
 crassulacean acid metabolism
 and, 305-24
 nitrate reductase and, 277-98
 phosphate acquisition and,
 682-85
 plant cold acclimation and,
 571-94
 Reporter constructs
 signal transduction and, 239
 Repressor genes
 shikimate pathway and, 473,
 478, 484
 Respiration
 history of research, 10
 photoprotection and, 345
 Response mutants
 signal transduction and,
 221-28
 Restriction enzyme-mediated
 insertional (REMI)
 mutagenesis
 cellulose biosynthesis and, 265
Retama sphaerocarpa
 pressure probe and, 453
rga1 mutant
 signal transduction and, 235-36

- Rheological properties
 cell
 cell wall extensibility and,
 401
 pressure probe and, 456-57
Rhizobium-legume symbiosis
 arbuscular mycorrhizal
 symbiosis and, 361-80
Rhizoctonia solani
 arbuscular mycorrhizal
 symbiosis and, 375
 Rhizoids
 gametophyte development in
 ferns and, 170-71
Rhizopus spp.
 history of research, 6
 Rhizosheaths
 roots in soil and, 695-712
 Rhizosphere
 arbuscular mycorrhizal
 symbiosis and, 361-80
 phosphate acquisition and,
 665-86
 roots in soil and, 695-12
Rhodobacter capsulatus
 DOXP pathway of isoprenoid
 biosynthesis and, 59
Rhodococcus rhodocrous
 shikimate pathway and, 491
Rhodospirillum rubrum
 CO₂ concentrating mechanisms
 in photosynthetic
 microorganisms and, 558
Rhus typhina
 leaf development in
 angiosperms and, 438
 Ribulose phosphates
 history of research, 8, 11
 phosphate translocators in
 plastids and, 30, 32
Ricciocarpus natans
 DOXP pathway of isoprenoid
 biosynthesis and, 56
 Rice
 C₄ gene expression and, 194,
 198-99, 201-3, 206
 cellulose biosynthesis and, 251,
 262
 cell wall extensibility and, 401,
 403
 chlorophyll degradation and, 69
 gametophyte development in
 ferns and, 165
 nitrate reductase and, 291
 phosphate acquisition and, 669
 phosphate translocators in
 plastids and, 41
 plant protein serine/threonine
 kinases and, 100, 113
 silicon and, 647-48, 651-52,
 657

- Ricinus* spp.
 pressure probe and, 459
 Rifamycin
 shikimate pathway and, 489-90
 RNases
 phosphate acquisition and, 672
 RNS genes
 phosphate acquisition and, 672
 Root-microbial interactions
 roots in soil and, 695-712
 Roots
 arbuscular mycorrhizal
 symbiosis and, 361-80
 asymmetric cell division and,
 523-27
 C₄ gene expression and, 192,
 199, 201, 206, 209
 chlorophyll degradation and, 79
 crassulacean acid metabolism
 and, 310
 phosphate acquisition and,
 668-85
 plant protein serine/threonine
 kinases and, 107, 118
 pressure probe and, 447-65
 proteoid roots, 710-11
 signal transduction and, 219,
 222, 225
 silicon and, 643, 648, 654
 in soil
 bacterial flora, 708-9
 corn, 698-709
 developmental changes,
 704-6
 developmental changes in
 individual roots, 702-4
 drought-resistant roots and
 meristems, 710
 epidermal surface, 705-6
 exploitation of soil
 heterogeneity, 710
 fine roots, 699-712
 framework roots, 698-702
 hair roots, 711-12
 introduction, 696-97
 key questions to be
 answered, 712
 loss of surface layers, 706
 mucilage, 704-5
 proteoid roots, 710-11
 rhizosphere, 706-8
 root cap cells, 704-5
 root hairs, 705-6
 root system and rhizosphere
 heterogeneity, 697-98
 surface features, 704-6
 water efflux from root
 surface, 706
 xylem, 702-4
Rosa spp.
 cell wall extensibility and, 410
- Rosettes
 cellulose biosynthesis and, 247,
 256
 signal transduction and, 225
 Rubisco
 C₄ gene expression and, 188-89
 CO₂ concentrating mechanisms
 in photosynthetic
 microorganisms and,
 539-62
 crassulacean acid metabolism
 and, 305-24
 silicon and, 651
 Rye
 phosphate acquisition and,
 669
 silicon and, 648
 Ryegrass
 silicon and, 652
- S**
- S6 kinase homologs
 plant protein serine/threonine
 kinases and, 122
Saccharomyces cerevisiae
 phosphate acquisition and,
 674
 plant protein serine/threonine
 kinases and, 99, 101,
 107-8, 115, 117-20
 shikimate pathway and,
 478-79
 signal transduction and, 238
Saccharum spp.
 silicon and, 651
 Salinity
 plant protein serine/threonine
 kinases and, 104
 silicon and, 655
Salix spp.
 DOXP pathway of isoprenoid
 biosynthesis and, 51, 57
Salmonella typhimurium
 shikimate pathway and, 474,
 481
Salvia officinalis
 DOXP pathway of isoprenoid
 biosynthesis and, 57
Sansevieria trifasciata
 silicon and, 647
Sarcina spp.
 cellulose biosynthesis and, 246,
 248
 Scavenging
 of reactive oxygen species
 photoprotection and, 333,
 347-50
 water-water cycle in
 chloroplasts and, 601-29
- Scenedesmus* spp.
 DOXP pathway of isoprenoid
 biosynthesis and, 49, 51,
 54-55
 history of research, 11
 photoprotection and, 342, 348
 water-water cycle in
 chloroplasts and, 604
 Schiff base mechanism
 shikimate pathway and, 481-82
Schizosaccharomyces pombe
 phosphate translocators in
 plastids and, 35
 plant protein serine/threonine
 kinases and, 117-18
 shikimate pathway and, 479
Schoenus nigricans
 silicon and, 648
 Scouring rushes
 silicon and, 641, 645, 658
Scutellopora castanea
 arbuscular mycorrhizal
 symbiosis and, 364
 S-domains
 plant protein serine/threonine
 kinases and, 111
 Secondary compounds
 phosphate translocators in
 plastids and, 27
 Secondary metabolism
 shikimate pathway and, 473-92
 Second-site revertants
 signal transduction and, 233
 Sedge
 C₄ gene expression and, 187,
 190, 205-6
 silicon and, 648
 Sedoheptulose-7-phosphate
 history of research, 8
 Seeds
 phosphate acquisition and, 675
 signal transduction and, 219,
 222
Selaginella spp.
 chlorophyll degradation and, 86
 Self-fertilization
 gametophyte development in
 ferns and, 167
 Senescence
 chlorophyll degradation and,
 67-87
 signal transduction and, 222
 Sequence families
 plant protein serine/threonine
 kinases and, 97-123
 Sequence-tagged reverse genetics
 phosphate acquisition and, 686
 Serine
 nitrate reductase and, 277, 281,
 290-93, 295-96
 shikimate pathway and, 490

- Serine/threonine kinases
 plant protein
 animals, 100-2
 calcium-dependent protein kinase (CDPK) subfamily, 104-7
 casein kinase I/II subfamilies, 119-20
 classification, 102-4
 cloning by functional homology, 99
 cloning by sequence homology, 98-99
 cloning from partial amino acid sequence of purified protein, 99-100
 cloning of mutants, 100
 CTR1/Raf-like subfamily, 121
 cyclin-dependent kinase (CDK) subfamily, 117-19
 functions, 100-2
 future research, 123
 GSK3/shaggy subfamily, 120-21
 introduction, 98-100
 LAMMER subfamily, 121-22
 MAP kinase kinase (MAPKK) subfamily, 115-17
 MAP kinase kinase kinase (MAPKKK) subfamily, 115-17
 MAP kinase (MAPK) subfamily, 115-17
 miscellaneous kinases, 122-23
 NAK subfamily, 122
 PVPK-1 subfamily, 122
 receptor-like kinase subfamily, 110-15
 S6 kinase homologs, 122
 SNF1-related protein kinase (SNRK) subfamily, 107-10
 yeast, 100-2
- Sex determination
 gametophyte development in ferns and, 163, 175-81, 183
- Sex differentiation
 gametophyte development in ferns and, 165, 175-81
- Sex regulator genes
 gametophyte development in ferns and, 179
- SFR genes
 plant cold acclimation and, 581-82
- SH2 domains
 plant protein serine/threonine kinases and, 110
- Shape
 leaf development in angiosperms and, 419
- Shikimate pathway
 chorismate synthase, 487-89
 DAHP synthase, 475-79
 3-dehydroquinate, 490-91
 3-dehydroquinate dehydratase-shikimate dehydrogenase, 481-83
 3-dehydroquinate synthase, 479-81

 - phosphate acquisition and, 669-72, 676, 681-83, 685
 - phosphate translocators in plastids and, 31
 - plant protein serine/threonine kinases and, 100, 114
 - silicon and, 645-46
- Tonoplasts
 - phosphate acquisition and, 674-75
 - pressure probe and, 454, 456
- topA* mutant
 - CO₂ concentrating mechanisms in photosynthetic microorganisms and, 543
- Topology
 - cellulose biosynthesis and, 265-66
- TOUSLED* gene
 - plant protein serine/threonine kinases and, 100
- TPS11* gene
 - phosphate acquisition and, 672
- Tracheophyta
 - gametophyte development in
 - ferns and, 164
- Tradescantia* spp.
 - gametophyte development in
 - ferns and, 174
 - pressure probe and, 457, 460
- tra* mutant
 - gametophyte development in
 - ferns and, 166, 178-80
- Transcriptional regulation
 - C₄ gene expression and, 187-210

crassulacean acid metabolism
and, 305-24
shikimate pathway and, 492
Transcription factors
plant cold acclimation and, 571
Transgenes
C₄ gene expression and,
196-198, 210
cell wall extensibility and, 408,
410, 412
crassulacean acid metabolism
and, 305-24
phosphate translocators in
plastids and, 39-41
shikimate pathway and, 473
signal transduction and, 225
Transient expression analysis
C₄ gene expression and,
199-202
Transition
plastid
chlorophyll degradation and,
87
Translocators
phosphate
in plastids, 27, 29-41
Transporters
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and,
539-62
phosphate and, 27, 361-80,
665-86
silicon and, 650
Trebouxia erici
CO₂ concentrating mechanisms
in photosynthetic
microorganisms and, 559
Tricarboxylic acid (TCA) cycle
shikimate pathway and, 489
Trichoderma spp.
cell wall extensibility and, 400,
404-5
Trifolium subterraneum
silicon and, 652
Trilete marking
gametophyte development in
ferns and, 170
Triose phosphate/phosphate
translocator
phosphate translocators in
plastids and, 29-31, 36-37
trp repressor
shikimate pathway and, 478,
484
Tryptophan
cell wall extensibility and, 400,
404
nitrate reductase and, 287
phosphate translocators in
plastids and, 30

shikimate pathway and,
474-75, 478, 482
Turgor
pressure probe and, 447,
452-55
Tyrosine
nitrate reductase and, 281
phosphate translocators in
plastids and, 30
plant protein serine/threonine
kinases and, 110
shikimate pathway and,
474-75, 477-78, 482
tyr repressor
shikimate pathway and, 478,
484

U

Ubiquinones
DOXP pathway of isoprenoid
biosynthesis and, 54

V

Vaccines
shikimate pathway and, 474
Vacuoles
phosphate acquisition and,
674-75
plant protein serine/threonine
kinases and, 106
Valine
nitrate reductase and, 290, 295
Valonia spp.
cellulose biosynthesis and, 254
pressure probe and, 449
Vanilla planifolia
crassulacean acid metabolism
and, 310-11, 322
Vascular plants
leaf development in
angiosperms and, 430
photoprotection and, 335
Vaucheria spp.
cellulose biosynthesis and,
254
VDL sequence motif
shikimate pathway and, 481
Ventral canal cells
gametophyte development in
ferns and, 182
Vesicle transport
asymmetric cell division and,
519-23
Vicia faba
arbuscular mycorrhizal
symbiosis and, 366, 376
plant protein serine/threonine
kinases and, 106
Vicilin
gametophyte development in
ferns and, 168
Vitis vinifera
pressure probe and, 464
silicon and, 656
Vrn1-Frl interval
plant cold acclimation and,
583-85
VspB promoter
phosphate acquisition and, 672
vic1 mutant
photoprotection and, 339

W

Wall loosening
cell wall extensibility and,
391-412
Water relations parameters
nitrate reductase and, 297-98
pressure probe and, 447-65
Water-water cycle
in chloroplasts
adjustment of
photoproduction ratio of
ATP/NADPH, 624-25
ascorbate, 621-22
ascorbate peroxidases,
611-13
attachment of
CuZn-superoxide
dismutase on thylakoid
membranes, 610-11
characteristics, 619
disproportionation of
superoxide, 609-11
dissipation of excess
photons, 625-27
flavodehydrogenases,
605-9
future research, 627-29
glutathione, 616-17, 621-22
introduction, 602-4
monodehydroascorbate,
613-15
photoreduction of dioxygen
to superoxide, 604-6
photoreduction of dioxygen
to water, 617-21
physiological functions,
621-27
protection of target
molecules from active
oxygen, 622-24
reduction of
dehydroascorbate with
DHA reductase and
regeneration of GSH,
616-17

- reduction of hydrogen peroxide to water, 611-13
 - reduction of monodehydroascorbate by MDA reductase, 614-15
 - reduction of monodehydroascorbate by reduced ferredoxin, 613-14
 - regeneration of ascorbate from oxidized ascorbates, 613-17
 - scavenging systems, 618-19
 - spontaneous
 - disproportionation of monodehydroascorbate, 615-16
 - stability, 619-21
 - stroma, 612-13, 618-19
 - thylakoids, 604-6, 610-13, 618-19
 - crassulacean acid metabolism and, 305-24
 - photoprotection and, 352
 - Weed control systems
 - shikimate pathway and, 473, 487
 - Western red cedar
 - silicon and, 658
 - Wheat
 - C₄ gene expression and, 202-3
 - leaf development in
 - angiosperms and, 421
 - plant cold acclimation and, 583-85
 - pressure probe and, 455
 - roots in soil and, 703
 - silicon and, 652, 654
 - Wild-type plants
 - cell wall extensibility and, 410
 - phosphate translocators in
 - plastids and, 39-40
 - signal transduction and, 229
 - Wilting
 - silicon and, 650
 - "Wings"
 - gametophyte development in
 - ferns and, 177
 - WIPK gene
 - plant protein serine/threonine kinases and, 116
- X**
- 230x mutant
 - gametophyte development in
 - ferns and, 166
 - Xa21 gene
 - plant protein serine/threonine kinases and, 100, 113
 - Xanthomonas oryzae
 - plant protein serine/threonine kinases and, 113
 - Xenopus laevis
 - plant protein serine/threonine kinases and, 106, 115
 - X-ray crystallography
 - cellulose biosynthesis and, 245-70
 - shikimate pathway and, 485, 492
 - Xylans
 - cell wall extensibility and, 406
 - Xylem
 - cellulose biosynthesis and, 262
 - pressure probe and, 447, 460-65
 - roots in soil and, 695-712
 - Xyloglucan endotransglycosylase
 - cell wall extensibility and, 391-412
- Y**
- Yeasts
 - arbuscular mycorrhizal symbiosis and, 378
 - asymmetric cell division and, 505-32
 - cellulose biosynthesis and, 263
 - DOXP pathway of isoprenoid biosynthesis and, 59
 - history of research, 6
 - nitrate reductase and, 285
 - phosphate acquisition and, 672-74, 679, 681, 683
 - phosphate translocators in
 - plastids and, 35-38
 - plant protein serine/threonine kinases and, 99-102, 107-9, 114-15, 117-20
 - shikimate pathway and, 477-79
 - signal transduction and, 238
 - Yellow-brown algae
 - silicon and, 645
- Z**
- Zea m1 protein
 - cell wall extensibility and, 403
 - Zea mays
 - shikimate pathway and, 486
 - silicon and, 653-54
 - Zinc
 - silicon and, 648
 - Zinc finger-type protein
 - C₄ gene expression and, 202
 - cellulose biosynthesis and, 258
 - shikimate pathway and, 486
 - Zymograms
 - shikimate pathway and, 483
